

ROTARY CLUB OF WINDSOR
MEETING CLEANUP AT JIMMY'S
JIMMY'S A/V PROJECTOR AND CORDS
JB Leep 10-13-26

Jimmy has been gracious enough to let us use his projector. If for some reason his projector is not accessible, we still have our own projector in the closet and we should have enough cables and adapters to make it work. The HDMI plug-in is a little flaky, so we have a VGA adapter to use the VGA-in if needed.

When we leave the room and go home, we need to leave the right cables for the next person. There are a multitude of cables, power cords, adapters, clickers. Here they are:

These belong to Jimmy:

1. (1) Standard HDMI cable with large connectors each end
2. (1) HDMI to USB-C cable to plug into computer directly if no HDMI
3. (3) Projector power cable
4. (4) A clicker. Note this one has large dongle that slips in the end.
5. (5) A video adapter that fits in a black case
6. (6) A white extension cord
7. (7) The projector
8. (8) The projector carrying case
9. Not shown – a yellow plastic extension cord cover we don't use

Everything goes in the black case except the white extension cord. Projector in the big compartment and everything else in the side pocket. Leave it on the table.

ROTARY A/V STUFF
JB Leep 10-13-26

Jimmy has been gracious enough to let us use his projector. If for some reason his projector is not accessible, we still have our own projector in the closet and we should have enough cables and adapters to make it work. The HDMI plug-in is a little flaky, so we have a VGA adapter to use the VGA-in if needed.

When we leave the room and go home, we need to take our own cables back. These belong to Rotary – they go into the box with the white plastic cover that says: “Main Meeting Stuff”

1. Anything that does not belong to Jimmy
2. A clicker with a thing that has a dongle stuck into a USB adapter
3. Bag of batteries
4. Black extension cord about 10' long – has a carpet that covers it. It's our carpet.
5. Standard HDMI cable with large connectors each end
6. Two little headphone extension wires with white Apple adapters for sound.
7. Our own normal HDMI cable
8. There might be other stuff
